# 1 Table

For $K, J \subset S^3$, We define the cobordism distance as $d_C(K, J) = g_4(K\# - J)$. This collapses to a metric in $\mathcal{C}$

| $d_C(K,J)$ | $O$ | $3_1$ | $4_1$ | $5_1$ | $5_2$ |
|---|---|---|---|---|---|
| $O$ | x | x | x | x | x |
| $3_1$ | x | x | x | x | x |
| $4_1$ | x | x | x | x | x |
| $5_1$ | x | x | x | x | x |
| $5_2$ | x | x | x | x | x |

Table 1: Concordance distance $d_C(K, J)$ for prime knots up to 5 crossings.
